

Hello OARC members,

The Club is going to receive donations of the following tower and tower sections:

1. One lightweight 60 ft. crank up tower...needs a new crank and cable but is in good shape otherwise. This tower would be great for someone with a mini-beam and VHF/UHF omni antenna. See attached pictures
2. Seven very lightweight 10 ft. tower sections...good shape. These would be great for someone that would like to put two of them together and mount to the eave of a house. You cannot climb these small sections, however, they can be easily "walked up". See attached pictures.

If you are in need and/or interested in these items please contact Dave Hartley, K5OZ, at 985-707-8010. Donations will go to the OARC Repeater fund.
